

BRILLIANT'S

A Systematic Approach to
**Operating System
Concepts**

S. R. Gupta

M.Sc. (Computer Science)
Assistant Professor,
Department of Computer Science & IT,
**Shri Vaishnav Institute of Management,
INDORE**

Nakoda Publishers & Printers, Indore

Contents

1. Operating System Concepts & Its Evolution

Introduction	1
Resource Allocation Principle	2
Beautification Principle	2
What is an Operating System ?	2
User view of operating system	5
System view of operating System	5
Functions of Operating System	5
Evolution of Operating System	6
Serial processing	7
Batch Processing	7
Multiprogramming	9
Types of Operating System	10
Batch Operating System	10
Disadvantages	11
Multiprogramming Operating System	12
Requirements of Multiprogramming system	14
Large memory	14
Proper job mix	15
Memory protection	15
Program status presentation	15
Multiprocessing System/Parallel system	15
Advantages of Multiprocessing	18
Real Time Operating System	20
Time- Sharing Operating System	22
Advantages	24
Disadvantages	24
Distributed Operating System	25
Network Operating System	25
● Questions	26

2. Structure and Organisation General Computer System

Computer System Structures	27
Computer System Operation	27
I/O Structure	29
I/O Interrupts	30
DMA Structure	32
Storage Structure	34
Main memory	35
Magnetic Disks	35
Magnetic Tapes	37
Hardware protection	38
I/O protection	39
Memory protection	39
CPU protection	40
Components of Operating system	41
Operating System Services	45
System calls	46
Process Control	47
File Manipulation	48
Device manipulation	48
Information maintenance	48
Communications	48
System Program	50
System Structure	51
Simple Structure	51
Monolithic system	51
Layered Structure Approach	53
Kernel Approach	54
Virtual Machine structure	55
Implementation of virtual machine	56
Client Server Structure (or Model)	57
System Generations	58
● Questions	60

3. Process Concepts

Introduction	61
Process	61
Background and foreground process	62
Process States	63
Process Control Block (PCB)	64
Process scheduling	65
Scheduling	65
Scheduling Queue	66
Context switching	68
Operations on Processes	69
Process Termination	69
Cooperating Processes	70
Information sharing	71
Computation Speed up	71
Modularity	71
Convenience	71
Frequently Asked Questions	71
● Questions	73

4. CPU Scheduling

Introduction to Scheduling	75
The CPU- I/O Burst Cycle	76
Dispatcher	76
CPU Scheduling Criteria	76
Preemptive Vs Non-preemptive Scheduling	77
Scheduling Levels	77
Scheduling Objectives	78
Priorities	78
CPU - Scheduling	78
Scheduling definition and notations	78
First-In-First-Out or First - Come, First-Served	
Scheduling (FIFO or FCFS scheduling)	79
Examples of FCFS Policy	79
The Advantage of FCFS Algorithm	83

The Disadvantage of FCFS Algorithm	83
Shortest Process Next (SPN)/Shortest Job Next (SJN)/ Shortest job first (SJF)/Shortest process first (SPF)/ Least completed Next (LCN)/Shortest time to go (STG)	84
Gantt chart	87
Advantages of SJF Algorithm	88
Disadvantages of SJF Algorithm	88
Priority Scheduling	88
Round Robin Scheduling	90
Example of Round Robin Policy	91
Multiple-level-Queue (MLQ) scheduling	92
Characteristics of Multilevel Queue Scheduling	92
Multilevel Feedback Queue Scheduling	93
Multiple Processor Scheduling	94
Real Time Scheduling	95
Numerical Questions	96
• Questions	98

5. Interprocess Communication

Introduction	103
Interprocess Communication	104
Basic Structure	104
Naming	105
Direct Communication	105
Indirect Communication	106
Buffering	107
Exception Conditions	109
Process Termination	109
Lost Messages	109
Scrambled Messages	110
Control Synchronization	111
Data Access Synchronization	112
Race Condition	112
Implementing control synchronization	113
Process Precedence	113
Process Precedence Graphs	113
Process precedence sequences	114

Critical Sections	115
Properties of a CS implementation	115
Process Synchronization With CS	116
Algorithmic Implementation of CS	116
Semaphore	121
Process Synchronization with Semaphore	121
Implementation of Semaphore	124
Classical IPC Problems	125
The Readers - Writers Problem	127
The Dining Philosophers Problem	128
Sleeping Barber Problem	130
● Numerical Questions	133
● Questions	134

6. Deadlocks

Introduction	136
Resource Deadlock	137
A simple System Model	137
Necessary Conditions for Deadlock	138
Solution of deadlock problem	139
Deadlock prevention	139
Deadlock Detection	140
Resource - Allocation graph	141
Single Instance of Each Resource Type	144
Multiple Instances of Each Resource Type	146
Recovery algorithm (in the increasing order of sophistication/ complexity)	148
Deadlock avoidance	148
Safe State	149
Implementing Deadlock Avoidance /Banker's Algorithm	150
Safety Algorithm	151
Resource-Request Algorithm	151
The Ostrich Algorithm for deadlock	152
Deadlock Prevention's Havender's Algorithms	152
Example of Banker's Algorithm	152

Weakness in Banker's Algorithm	156
● Numerical Questions	156
● Questions	160

7. Memory Management

Introduction to Memory Management	162
Goals of Memory Management	163
Characteristics of An Ideal Allocation Strategy	163
Memory Management Background	163
Address Binding	164
Overlays	166
Logical and Physical address Space	167
Swapping	168
Contiguous versus Noncontiguous memory allocation	169
Contiguous Allocation	169
Single Partition Allocation/ Single user Contiguous Allocation	170
Single process monitor	170
Advantages	171
Disadvantages	171
Software support or flow chart	172
Multiple Partition Allocation	172
Fixed Partition Allocation/ Static Partition Allocation	172
Protection and Sharing	175
Fixed Partitioning imposes many restriction	176
Dynamic Partition allocation / Vairable Partition Allocation	176
External Fragmentation	179
Flow Chart or Software Support for Partitioned Allocation	182
Advantages	182
Disadvantages	182
Software support or Flow chart for relocatable partition allocation	183
Paging	183
Basic Concept	183
Hardware Support for Paging	187
Sharing in a paging system	190

Protection in a paging System	191
Advantages	194
Disadvantages	194
Segmentation	194
Address Mapping in a Segmented System	195
Protection in a Segmented System	199
Access control in Segmentation System	200
Flow chart for segment address mapping	201
Advantages	201
Disadvantages	202
● Numerical Questions	202
● Questions	204

8. Virtual Memory & its Design Issues

Introduction To Virtual Memory	208
Advantages of Virtual Memory	209
Implementation of Demand Paging	210
Software Support or flow chart for demand paging	212
Virtual storage management strategy	212
Page Replacement	213
Page Replacement algorithm	213
Page replacement Policies	214
Implementation of LRU	216
Page Reference String	218
Principle of Locality	218
Working Set Model	218
● Numerical Questions	218
● Questions	223

9. File Management Concepts

Introduction to File Management	226
File attributes	228
File operation	228
File Types	230

Access Methods	231
Directory Structure	232
Single Level Directory	232
Two level Directory	233
Tree Structured Directories	233
Path Names	234
Directory Implementation	235
File system of MS-DOS	236
File system of UNIX	237
Structure of file system	238
● Numerical Questions	239
● Questions	240

10. Disks

Introduction to Disk	241
Seek time	241
Rotational Latency	241
Disk bandwidth	242
Disk Allocation Method	242
Contiguous Allocation	242
Non Contiguous Allocation	244
Linked Allocation	244
Indexed Allocation	245
Disk Space management Methods	247
Linked List	248
Bit Map	248
Disk Scheduling	249
First-Come-First-Service (FCFS) Scheduling	249
Shortest seek time First Scheduling	250
Scan Scheduling	251
● Numerical Questions	253
● Questions	254

11. Peripheral Devices Management & Clock

Device Management & Hardware	256
I/O Devices	257
Block Devices	257
Character Devices	257
Device Controllers	257
Direct Memory Access (DMA)	258
Principles of I/O software	259
Objectives or Goals of I/O Software Design	259
Device independent software	261
User space I/O software	261
I/O software layers	262
Introduction to Clock	262
Clock Hardware	262
Clock Software	263
Terminals	264
Memory - Mapped Terminals	265
Terminal Software	265
Input Software	265
Output Software	266
● Questions	266

12. Protection & Security Mechanisms

Protection	267
Password	268
Access Lists	268
Access Groups	268
Recovery	270
Consistency Checking	270
Backup & Restore	270
Types of backup	271
File system security	271
System Protection & its need	271
Role of Protection	271

Implementation of protection domain	272
Hierarchical Domains or ring protection scheme	272
Access Matrix	273
Implementation of access matrix	274
Language Based Protection	274
Enforcement by a kernel versus enforcement provided by a compiler	274
System Security	275
Authentication	275
Security Threats	276
System Threats	276
Cryptography	277
Data Encryption	278
● Questions	279

13. Multimedia

Data Compression	250
Types of Compression	281
CCITT Group 3 1 - D Compression technique	282
CCITT group 32 D compression technique	283
Data formatting for CCITT group 32D compression technique	284
CCITT group 4 2D compression technique	286
JPEG	286
● Questions	287

14. Operating System Performance

Introduction	288
Performance of a System	289
Performance Evaluation	289
Performance monitoring	291
● Questions	292
